

**Greenscape** supplies, and installs if required Hydrocell Green roofs and Vertical Green walls. The company provides a total green roof system including root barrier, filter membranes, drainage boards, growing media, lightweight soil mixtures with Hydrocell, and other components required for high performance systems

The vertical green wall system features a series of modular panels containing a light weight soil-less growing media in which a wide variety of plant species grow. Supported by a hydroponic watering system, the vertical garden panels are attached to a vertical surface such as a wall, fence or balcony, either indoor or outdoor.

Greenscape's roof garden system is suitable for the following roof garden types

- \* intensive roof garden system
- \* semi - extensive roof garden system
- \* extensive roof garden system
